//note="Organ: testis: Vector: pucl8; Site_1: Smal; Site_2: Smal; Amin: library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196, 716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue many and cDNA amplification were performed under low stringency conditions.

               This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hursbridge or serovar hursbridge or the species L. fainei. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and

                                                                                                                                                                                                                                                                                                                                      This DNA sequence comprises the maize 233 Zm41-A gene. This is an orthologue of Arabidopsis Ms41-A (see T90522), a gene that confers corthologue of Arabidopsis Ms41-A (see T90522), a gene that confers contact that showed homology to Ms41-A DNA, isolation of a partial cDNA clone, and use of this clone to isolate Zm41-A genes is a partial cDNA clone, and use of this clone to isolate Zm41-A genes is 231 (T90542), Z33 (T90543) and Z35 (T90544) from genomic lambda ibraries. The genes show a high level of conservation. Z35 may be derived from Z31 via genetic rearrangements, deletions and/or insertions. Z31 has subsequent deletions from Z35 and is truncated, having only exons 3, 5 and 6. The Ms41-A and Zm41-A genes antisense or ribozyme sequences can be used to produce transgenic plants with controlled male fertility. Male sterile plants where restoration of fertility is not needed, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                           Nucleic acid encoding proteins involved in male fertility in plants - used to control fertility and for production of hybrid seed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acid sequences (V84411 to V84633)

C encoding human secreted proteins (W88534 to W88756). The secreted protein

C gene sequences are deposited with the ATCC under deposit numbers ATCC

Gene sequences are deposited with the ATCC under deposit numbers ATCC

```
209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Pc portion (e.g. v59502) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic acid sequences: v95311-v85012; amino acid sequences WW4731-W73056) which are useful for preventing, treating or ameliocating medical conditions e.g. by protein or gene therapy. Also, pathological conditions an be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see V55511 for described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polyeptides can be used in vaccines for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in mannans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated Borrelia burgdorferi nucleic acids - used to develop products for the diagnosis, prevention and treatment of diseases caused by Borrelia, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigenic protein; vaccine; Lyme disease; infection; detection;

The enzyme catalyses the formation of malonyl-CoA from acetyl-CoA and bicarbonate, and requires a biotin malonyl-CoA from acetyl-CoA and bicarbonate, and requires a biotin prosthetic group for activity. The enzyme is inhibited by several prosthetic group for activity. The enzyme is in monocotyledons. The herbicides (e.g. fluazifop and sethoxydim) in monocotyledons. The sequence is a 2-kb EcoAI fragment of phage lambda-gtll clone 15-14, solated from amize-inbred A188 seedling cDNA library by transcarboxylase active site domain (T17112) and the biotin binding transcarboxylase active site domain (T17112) and the biotin binding site domain (T17113) coding sequences may be used to screen plants site domain (T17113) coding sequences may be containing the gene, a for similar genes. An expression cassette containing the gene, a mutant or an antisense DNA sequence may be combined with a plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               portion of a maize acetyl con carboxylase (ACCase) gene located at portion of a maize acetyl codo carboxylase (ACCase) gene located at bases 2883 to 83 from the 3' stop codon. Clone #15-14 was isolated from a lambda gtil cDWA library of maize inhored Al88 seedlings by from a lambda gtil cDWA library of maize inhored Al88 seedlings by screening with maize ACCase and isolated. Other ACCase DNA fragments screening with maize accamplete cDNA (739905) coding for ACCase (W05590) have also been isolated. ACCase DNA can be incorporated into a vector and used to increase the herbicide tolerance or oil into a vector and used to increase the herbicide tolerance or oil heterologous systems.
                                                                                                                                                                                                                                                                                                                                      Gaps
promoter, e.g. a cauliflower-mosaic virus 35S promoter or mopaline-synthase promoter, and N-terminal maize chloroplast transit peptide sequence in a plasmid vector for high-level tissue-specific gene expression, to confer herbicide resistance and/or alter the oil content of the plant, or to increase the plant and/or alter the oil content of the plant, or to increase the plant and vectors yield, so that the crystallized ensyme may be used to screen and identify other herbicides that bind to and inhibit the ensyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A 2 kb EcoRI fragment (739904) of lambda clone #15-14 includes a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present DNA sequence is a 2kb EcoRI fragment of lamda clone #15-14 including a portion of a maize acetyl CoA carboxylase (ACCase) gene located at bases 2883 to 83 from the 3' stop codon. AcCase is involved in fatty acid synthesis and is the target of the specified herbicides. Transformation of plants with ACCase imparts resistance to cyclohexanedione and aryloxyphenoxypropanoic acid herbicides and alter the oll content. The ACCase DNA is also used as source of probes and primers for the identification of transgenic plants; in marker-assisted plant selection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA encoding acetyl-CoA carboxylase from oats, used to produce transformed plants with herbicide resistance and altered oil content
                                                                                                                                                                                                                    EcoRI fragment of lamda clone #15-14 with maize ACCase gene portion.

This DNA, isolated from Mycobacterium leprae, encodes a precursor during the protein from which an "intein" (see M15074) is excised during maturation. The gyrase and its coding sequence are useful to fabricate products that alter the maturation of proteins essential for the development of infectious agents by altering the protein splicing of precursor polypeptides of the proteins. W. flavescens, M. gordonae and M. kansasii are used: (a) to modify the genome of a eukaryotic cell that lacks endogenous biological activity identical to that of the polypeptide; (b) to replace a copy of a gene present in a recipient genome by integration of a gene different from that where the integration takes place; and (c) for targetted insertion of a foreign DNA sequence into a selected site in the genome of a eukaryotic cell not containing the specific cleavage sites of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

RESULT 13 T39905

```
The sequence is that of the A3 acetyl coA carboxylase (ACCase) CDNA can alze clone which can be used to probe plant DNA to isolate other can maize clones. It may be used with plant regulatory sequences to produce expression cassettes for ACCase. These cassettes are used to produce expression cassettes for ACCase. These cassettes are used to the composition of seeds or other plant parts, e.g. enabling oil-content cobering plants such as oilseed rape, sunflower or oilpalm, having a lower or modified oil content to be produced. It can be used to form cassettes for overexpression of ACCase., leading to produce of plants with an increased oil content. It may also be used to form the ACCase expression of content. It may also be used to recover of plants with an increased oil content. It may also be used to recover cof plants with an increased oil content. It may also be used to recover correspectific or developmentally regulated manner, and this RNA in a correct of plants with a concept season of someocotyledonous plants can be made used to inhibit ACCase expression. Monocotyledonous plants can be made corresponded on a content to these herbicides such as fluazifor and alkylketones of transforming with cassettes adapted to expression of dicot achesived by overexpression of monocot ACCase. This is consibly by expression of a resistant form of maize ACCase. This correct term form of maize ACCase. This destroy weeds growing between the plants. This allows the overall destroy weeds growing the method, weeds such as wild oats may be previous crop. Using the method, weeds such as wild oats may be previous crop. Using means which are safer, cheaper or more effective.

The complete sequence was deduced from CDNA clone #18-5, obto from a lambda gtll CDNA library of maize inbred A188 seedlings, and from PCR amplifications (see also T39918-23) Genomic ACCase DNA fragaments have also been isolated (see also T39906-16). ACCase DNA regaments have also been isolated (see also T39906-16). Accase DNA herbicide tolerance or oil content of a transgenic plant, or used

Accase is involved in fatty acid synthesis and is the target of the specified herbicides. Transformation of plants with Accase imparts tessistance to cyclohexanedione and artyloxyphenoxypropanoic acid herbicides and alter the oil content. The Accase DNA is also used source of probes and primers for the identification of transgenic plants; in marker-assisted plants telection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human food and in genetic dissection of the groat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present CDNA sequence encodes maize acetyl CoA carboxylase (ACCase)

This can be used in a method of preparing an herbicide resistant corn plant which comprises crossing a first corn plant to a second corn plant so as to yield a progeny plant, where the first corn plant comprises at least 1 herbicide resistant allele which is not allelic to the herbicide resistant allele present in the first plant. The herbicide resistant corn plants are prepared using Acc1 and Acc2 gene combinations which impart cylcohexanedione (CHD) or aryloxyphenoxypropanoic acid (APA) herbicide tolerance to the corn plants. The methods are used to impart CHD entricide tolerance to corn plants and to produce CHD or APA herbicide tolerance to corn plants and to produce CHD or APA herbicide tolerance to a corn plants. Character and the methods can also be used to impart tolerance to a corn plant to an agent which inhibits acetyl COA carboxylase, selected from 3.(2.4-dichlorophenyl)-perhydroludolizine-2,4-dione, 3-isopropyl-6.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 71,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1, Application US/08874162
Patent No. 5872216
GENERAL INFORMATION:
APPLICANT: Hannah, L. Curtis
APPLICANT: Giroux, Michael
TITLE OF INVENTION: Materials and Methods for Increasing
TITLE OF INVENTION: Corn Seed Weight
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
                                                                                                                                                                                                                                              SOFTWARE: Patentin Release #1.0, Version #1.25 CURRENT APPLICATION DATA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADDRESSEE: Saliwanchik, Lloyd & Saliwanchik

                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1367,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
Sequence 19, Application US/08303004
Patent No. 5556955
GENERAL INFORMATION:
APPLICANT: Vergnaud, Gilles
TITLE OF INVENTION: Process for Detection of New Polymor-
TITLE OF INVENTION: phic Loci in an ADN Sequence, Nucleotide Sequences Forming
TITLE OF INVENTION: Hybridisation Probes and Their Biological Applications
NUMBER OF SEQUENCES: 38
CORRESPONDENCE ADDRESS:
ADDRESSEE: Oliff & Rarrial-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1729, Application US/08585684B
Patent No. 5877021
GENERAL INFORMATION:
APPLICANT: Stinchcomb, Daniel T.
APPLICANT: Jarvis, Thale
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE
TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
NUMBER OF SEQUENCES: 2751
CORRESPONDENCE ADDRESS:

  This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainel. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and diagnosis of past or present LS infection.
                                                                                                                                                                                                                                                                                                                                                                 SAGE tag; serial analysis of gene expression; antigen-presenting cell; APC; monocyte-derived dendritic cell; differential gene expression; immunostimulatory cofactor; costimulatory factor; CTL; cytotoxic T-lymphocyte; tumour antigen; immunotherapy; anticancer; ss.

Sequences 27573-279709 represent SAGE (serial analysis of gene expression) tags used to identify mRNA transcripts encoding captressed in monocyte-derived dendritic cells compared differentially expressed in monocyte-derived dendritic cells compared with monocytes. Some of the transcripts correspond to known genes or ESTS (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while presentation of the cytotoxic immune response, particularly against tumour calls, immunostimal acrops factors play an important role in the cytotoxic immune response, particularly against tumour cells, immunostimalatory factors play an important role in the complex) and subsequent recognition by T-cell receptors is alone insufficient to activate a robust cytotoxic immune response that can lyse complex) and subsequent recognition by T-cell receptors is alone insufficient activation of cytotoxic T-lymphocytes (CTLS). Nucleic acid sequences identified using the SAGE tags have several potential uses.

They may be used in vaccines to induce an immune response, particularly against a tumour antigen. to modulate the genotype of an APC; to screen for agents that modulate expression of discentially expressed genes in an APC; and as hybridisation probes/amplification primers for the expression of these genes. Detection of the dendritic cell differentially expressed genes, or of their encoded proteins, can be used in active immunotherapy (or to stimulate production of a population of antigen-specific effector cells) and vectors containing them are used in active immunotherapy (or to stimulate production of a presentation of endogenous APCs and uprequlates the APCs for the presentation of co-stimulatory signals, migration to Tcell-rich sites, correction of Tcell growth factors and uprequlates the APCs for the secretion of Tcell growth factors and uprequired for recruitment of immune effector cells.
                                                                                                                                                                                                                   Isolated polynucleotides differentially expressed in antigen-presenting cells, useful in gene vaccines against cancer .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

that are preferentially transcribed in the metastatic breast tumour that are preferentially transcribed in the metastatic breast tumour cells). Issue (i.e. are upregulated in metastatic breast tumour cells). 203942 to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). Itsue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions. Or standard immunoassays or hybridisation/amplification reactions. Or second that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, or e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines, for diagnosing breast cancer and for raising specific cantibodies (Ab). Ab are used to detect the polypeptides or as therapeutic and isolate populations of educated, antispen-specific immune effecter immune effecter immune effecter immune has a cells, immune has a superprediction and these used for adoptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                that are preferentially transcribed in the metastatic breast tumour that are preferentially transcribed in the metastatic breast tumour cells). 283942 tassue (i.e. are upregulated in metastatic breast tumour cells). 283942 to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatio) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, or e.g. therapeutic genes (also ribozymes or antisense sequences).

Co f e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic gentis disolate populations of educated, antigen-specific immune effecter cells, e.g. cytotoxic T lymphocytes, and these used for adoptive

Metastatic breast tumour cell upregulated transcript tag #2351.

07-APR-2000 (first entry)

283117;

```
Tablo 10 20234 represent tags corresponding to distinct transcripts that are preferentially transcribed in the metastatic breast tumour cells). 283942 tepresent tags corresponding to distinct transcripts that are to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring is by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines; for diagnosing breast cancer and for raising specific continuousles (Ab). Ab are used to detect the polypeptides or as therapeutic agentic. Host cells that produce the polypeptides or as therapeutic agentic and isolate populations of educated, antigen-specific immune effecter immuncherancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            280767 to 283941 represent tags corresponding to distinct transcripts
                                                                                                                                                                                                                                                                                                                                                                                             Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis, prevention and treatment of cancer -

that are preferentially transcribed in the metastatic breast tumour trissue (i.e. are upregulated in metastatic breast tumour cells). 283942 to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). 283942 to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunosassy or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially computed that modulate expression of the transcripts are potentially the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also riboxymes or antisense sequences). The transcripts are also useful in vaccines. Polypetides encoded by the transcripts are also useful in vaccines, for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypetides or as therapeutic agents. Host cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter immune effecter immune transcripts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0;
